HOW TO FIGURE NUMBER OF FEET IN FRAMES: Add together the length and width of the frame.

Example: 16 x 20 frame of 3 inch moulding: 16 + 20 = 36. Refer to 36 in first column, then refer to the 3-inch column, and you find 8.3 feet, the amount of moulding it takes to make the frame. Next, consult the selling price of moulding per-foot table. When the United Inches exceed the number shown, go to the next highest number to determine footage.

Multiply the per-foot cost (chop, join or lineal) by the number of feet to determine the cost.
